SAFETY PRECAUTIONS

1.1 Scope of Application

	inual describes ing of the follow	
HS2-3K-S2;	HS2-3.6K-S2;	HS2-4K-S2
AS2-3K-S;	AS2-3.6K-S;	AS2-4K-S;

1.2 Safety Instructions

· DANGER	indicates a hazardous situation
·WARNING	indicates a hazardous situation
	l indicates a hazardous conditio

NOTICE indicates a situation that can result in potential damage, if not avoided.

1.3 Target Group

Only qualified electricians who have read and fully understood all safety regulations contained in this manual can install, maintain and repair the device. Operators must be aware of the high-voltage device.

and detailed procedures for installing, operating, maintaining, and ducts:

2; HS2-4.6K-S2; HS2-5K-S2; HS2-5K-S2-B; HS2-6K-S2;

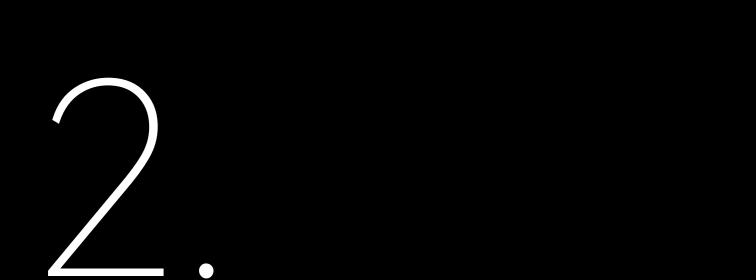

AS2-4.6K-S; AS2-5K-S; AS2-5K-S-B; AS2-6K-S;

ich, if not avoided, will result in death or serious injury.

nich, if not avoided, can result in death or serious injury or moderate injury.

hich, if not avoided, can result in minor or moderate injury.

PREPARATION

2.1 Safety Instructions

For safety, be sure to read all the safety instructions carefully prior to any works, and please observe the appropriate rules and regulations of the country or region where you installed all-in-one energy storage system.

- There is possibility of dying due to electrical shock and high voltage.
- are plugged out.
- Do not stay close to the equipment while there are severe weather conditions including storm, lighting, etc.
- for at least five minutes to let the energy storage capacitors completely discharged after disconnecting from power source.
- · Please keep the power off prior to any operations ·Do not expose the battery to temperatures in excess of 50°C.
- · Do not subject the battery to any strong force.
- · Do not soak the battery in water or expose it to moisture or liquids.
- · Do not use the battery in areas where the ammonia content of the air exceeds 20ppm.

Only qualified personnel who has full knowledge of local safety regulations and local standards on battery can install, maintain, retrieve and process this product.

SAJ electric shall not be liable for any loss or warranty claims arising from any unauthorized change of product which may cause fatal injury to the operator, third party or equipment performance. · For personal and property safety, do not short-circuit the positive (+) and negative (-) electrode terminals.

· Risk of damage due to improper modification ·Use professional tools when operating the products. The inverter will become hot during operation. Please do not touch the heat sink or peripheral surface during or shortly after operation.

Do not touch the operating component of the inverter; it might result in burning or death. To prevent risk of electric shock during installation and maintenance, please make sure that all AC and DC terminals Do not touch the surface of the equipment while the housing is wet, otherwise, it might cause electrical shock.

Before opening the housing, the SAJ inverter must be disconnected from the grid and PV generator; you must wait

Keep inflammable and explosive dangerous items or flames away from the battery.

· During installation of the battery, circuit breaker must be disconnected from the battery pack wiring.

2.2 Explanations of Symbols

Symbol	Description
<u>.</u>	Dangerous electrical voltage This device is directly connected to public grid, thus all work to the battery shall only be carried out by qualified personnel.
	No open flames Do not place or install near flammable or explosive materials.
<u></u>	Danger of hot surface The components inside the battery will release a lot of heat during operation. Do not touch metal plate housing during operating.
	Attention Install the product out of reach of children
	An error has occurred Please go to Chapter 7 "Troubleshooting" to remedy the error.
	This device shall NOT be disposed of in residential waste
X	This battery module shall NOT be disposed of in residential waste
CE	CE Mark Equipment with the CE mark fulfills the requirements of the Low Voltage Directive and Electro Magnetic Compatibility.

2.3 Battery Handling

Operate and use the battery properly according to user manual, any attempt to modify battery without the permission from SAJ will void the limit warranty for the battery.

- The battery must be installed at a suitable location with sufficient ventilation
- Do not use the battery if it is defective, damaged or broken.
- Only use the battery with compatible inverter.
- Do not use the battery with other type of battery.
- Make sure the battery is grounded prior to use.
- Do not pull out any cables or open the battery enclosure when the battery is powered on.
- Only use the battery as intended and designed.

2.4 Emergency Situation

Despite of its careful and professional protection design against any hazards, damage of the battery may still possible. If a small amount of battery electrolyte is released due to a serious damage of the outer casing; or if the battery explodes due to not being treated timely after a fire breaks out nearby, and leaks out poisonous gases such as carbon monoxide, carbon dioxide and etc., the following actions are recommended:

1) Eye contact: Rinse eyes with a large amount of running water and seek medical advice

2) Contact with skin: Wash the contacted area with soap thoroughly and seek medical advice

Inhalation: If you feel discomfort, dizziness or vomiting, seek medical advice immediately.

4) Use a FM-200 or Carbon Dioxide (CO2) fire extinguishers to extinguish the fire if there is a fire in the area where the battery pack is installed. Wear a gas mask and avoid inhaling toxic gases and harmful substances produced by the fire.

5) Use an ABC fire extinguisher, if the fire is not caused by battery and not spread to it yet.

WARNING

·If a fire has just occurred, try to disconnect the battery circuit breaker and cut off the power supply first, but only if you can do so without endangering yourself.

 \cdot If the battery is on fire, do not attempt to extinguish the fire but evacuate the crowd immediately.

Potential danger of damaged battery:

Chemical Hazard: Despite of its careful and professional protection design against any hazard results, rupture of battery may still occur due to mechanical damage, internal pressure etc., and may result in a leakage of battery electrolyte. The electrolyte is corrosive and flammable. When there is fire, the toxic gases produced will cause skin and eyes irritation, and discomfort after inhalation. Therefore:

1) Do not open damaged batteries;

2) Do not damage the battery again (shock, fall, trample, etc.);

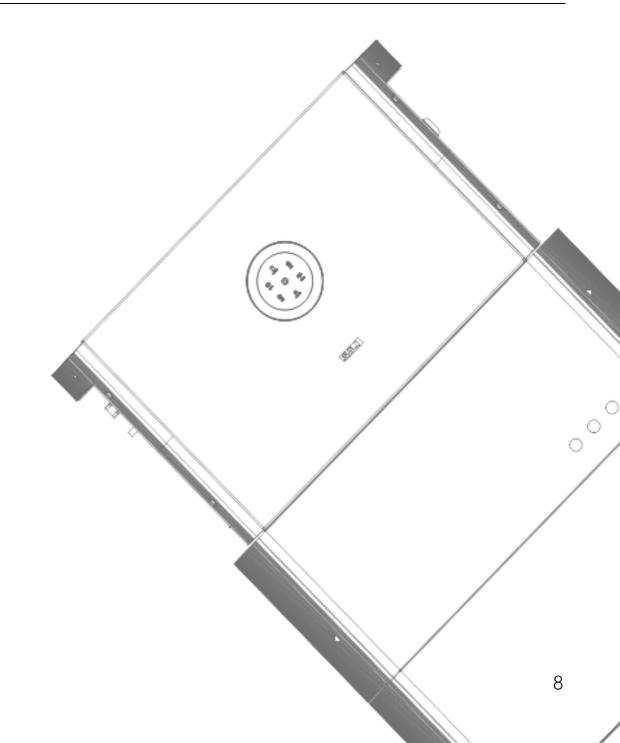

3) Keep damaged batteries away from water (except to prevent an energy storage system from catching fire);

4) Do not expose the damaged battery to the sun to prevent internal heating of the battery.

Electrical hazard: The reason of fire and explosion accidents in lithium batteries is battery explosion. Here are the main factors of battery explosion:

1) Short circuit of battery. Short circuit will generate high heat inside battery, resulting in partial electrolyte gasification, which will stretch the battery shell. The temperature reaching ignition point of internal material will lead to explosive combustion.

2) Overcharge of battery. Overcharge of battery may precipitate lithium metal. If the shell is broken, it will come into direct contact with the air, resulting in combustion. The electrolyte will be ignited at the same time, resulting in strong flame, rapid expansion of gas and explosion.

PRODUCT INFORMATION

3.1 Application Scope of Products

The product is included a hybrid inverter/ AC-coupled inverter with battery and it is applied to residential photovoltaic energy storage system. The energy storage system is able to store the energy for future use. It is built internally with a battery management system (BMS), which is used to ensure efficiency of the battery and protect the battery from operating outside its specified limitations.

3.2 Specification for Product Model

HS2/AS2 -XK (1) HS2/AS2 represents for product name. ② XK represents rated energy XkW of storage system, for example, 5K means 5kW.

- ③ S means single phase, S2 means single phase with 2MPPT.
- ④ B indicates this model is ONLY applicale to Belgiun

INSTRUCTIONS FOR INSTALLATION

4.1 Unpacking and Inspection 4.1.1 Checking the Package

Although SAJ's product have thoroughly tested and checked before delivery, it is uncertain that the product may suffer damages during transportation. Please check the package for any obvious signs of damage, and if such evidence is present, do not open the package and contact your dealer as soon as possible

4.1.2 Scope of Delivery

Please contact after sales if there are missing or damaged components.

4.2 Installation Method and Position 4.2.1 Installation Position and Clearance

This device is cooled by natural convention and suggested an indoor installation or an installation under a sheltered place to prevent the product from exposure to direct sunlight, rain and snow erosion.

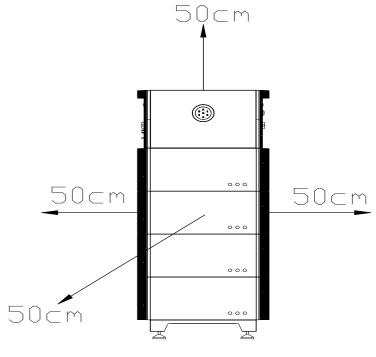

shorten the service life of the system.

Figure 4.2 Installation clearance

Figure 4.1

Installation location

Please reserve enough clearance around the product to ensure a good air circulation at the installation area. Because poor air ventilation will affect the working performance of internal electronic components and

4.2.2 Mounting Method

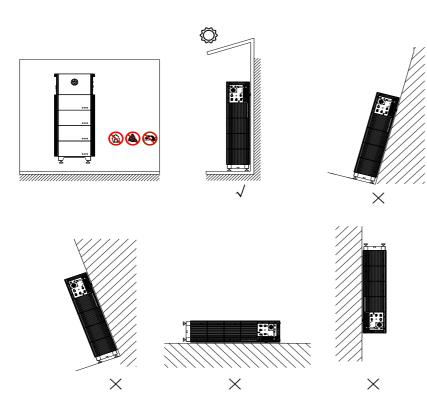

Figure 4.3 Mounting method

- (1) The equipment employs natural convection cooling, and it can be installed indoor or outdoor.
- ⑤ Mount vertically. Never install the device tilted forwards, sideways, horizontally or upside down.
- (6) When mounting the device, please consider the solidity of wall for product, including accessories, make sure the wall has enough strength to hold the screws and bear the weight of products. Please ensure the mounting bracket mounted tightly.

Installation Environment Requirements

- The installation environment must be free of inflammable or explosive materials.
- Install the device away from heat source.

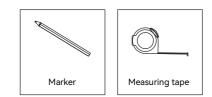

- Do not install the device at a place where the temperature changes extremely.
- Keep the device away from children.
- bedroom, lounge, living room, study, toilet, bathroom, theater and attic.
- When installing the device at the garage, please keep it away from drive way.

Note: When installing outdoors, the height of the device from the ground should be considered to prevent the device from soaking in water. The specific height is determined by the site environment.

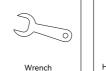

4.3 Mounting Procedure

4.3.1 Installation Tools

Installation tools include but are not limited to the following recommended ones. Please use other auxiliary tools on site if necessary.

•

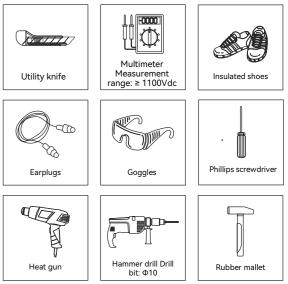

Dust mask

22

• Do not install the device at daily working or living arears, including but not limited to the following areas:

• Keep the device from water sources such as taps, sewer pipes and sprinklers to prevent water seepage.

• The product is to be installed in a high traffic area where the fault is likely to be seen.

4.3.2 Mounting Procedures

The product employs either ground mounting or wall mounting and its position is determined by the drilled holes of bracket.

Ground Mounting

The ground should be flat and no inclination.

Step 1: Assemble the base. Adjust the height of foot cup, make sure the surface of base is horizontal.

Figure 4.4 Assembling the base

> Step 2: Place the base on the ground, make sure the edge of base is 28~34mm away from wall. Place the battery module on the base and secure it with screws (M4*10).

Figure 4.5 Securing the battery

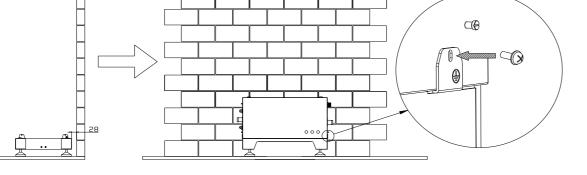

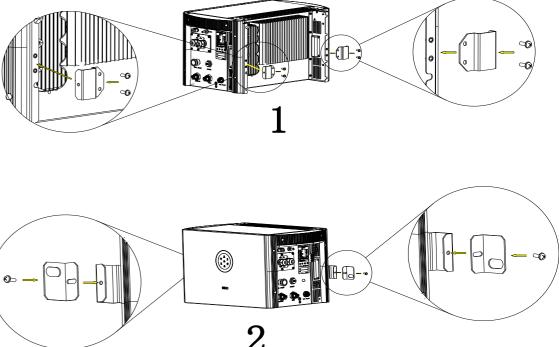

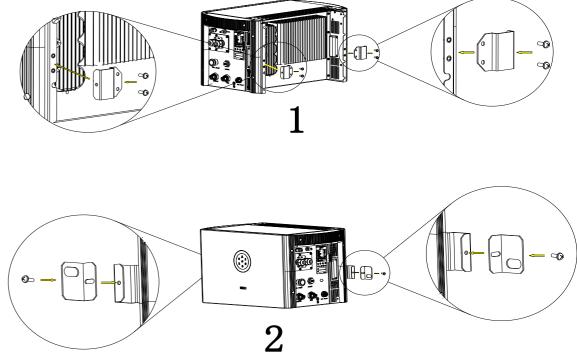

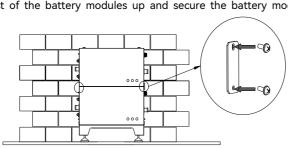

Figure 4.7 Securing inverter Step 4: Install the locking brackets (inverter) with screws (M6*12) onto the inverter, and then install the locking brackets (wall) onto the locking brackets (inverter) with screws (M6*12).

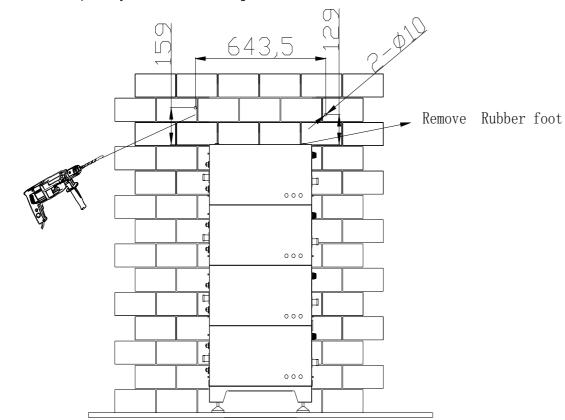

Step 3: Stack the rest of the battery modules up and secure the battery modules with locking brackets (M4*10)

Figure 4.6 Securing battery modules with locking brackets

Step 5: After the battery modules installation, mark the proper positions of inverter and drill holes (10mm in diameter, 65mm in depth) on those positions by using the inverter as a template. Remove the rubber feet for the top battery module before installing inverter.

Step 6: Use a rubber hammer to drive the screw fixing seat into the holes to fix the bracket, use the wrench to tighten the screws (M8*80 screw) to secure the inverter. Secure the inverter and battery with locking brackets.

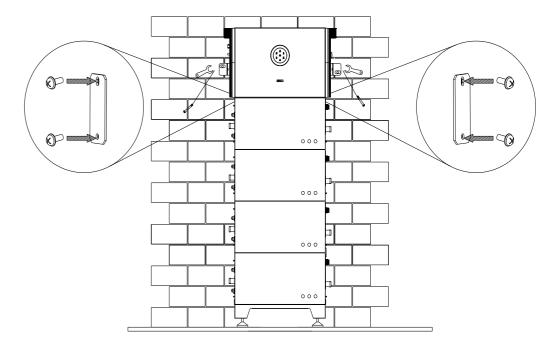

Figure 4.9 Installing inverter

Figure 4.8

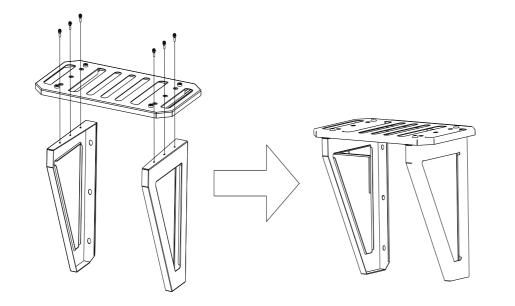

inverter

Drilling holes to install

Wall Mounting

Make sure that the wall is capable of mounting screws and supporting the weight of the battery pack before installation. For safety reason, solid wall is recommended for wall mounting, cavity wall and timber wall are not allowed to install the battery system.

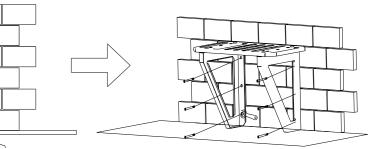

Step 1: Assemble the bracket and secure it with screws

Step 2: Mark the proper positions of mounting bracket and drill holes on those positions (14mm in diameter, 65mm in depth) by using the mounting bracket as a template, and then use a rubber hammer to drive the screw fixing seat into the holes to fix the bracket. Note: It is recommended to leave no gap between the bracket and ground.

Figure 4.11 Drill holes' dimensions of bracket

Figure 4.10 Assembling the bracket

416

280 140 Step 3: Install the battery module on the bracket, make sure the battery module position fits with the position of rubber feet on bracket, and use a screw (M4*10) to secure it with locking brackets.

Step 4: Install the locking brackets (inverter) with screws (M6*12) onto the inverter, and then install the locking brackets (wall) onto the locking brackets (inverter) with screws (M6*12).

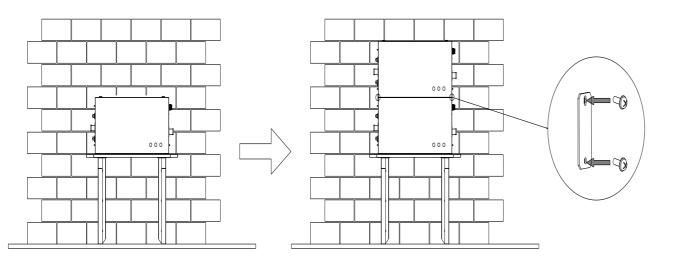

Figure 4.13 Securing inverter

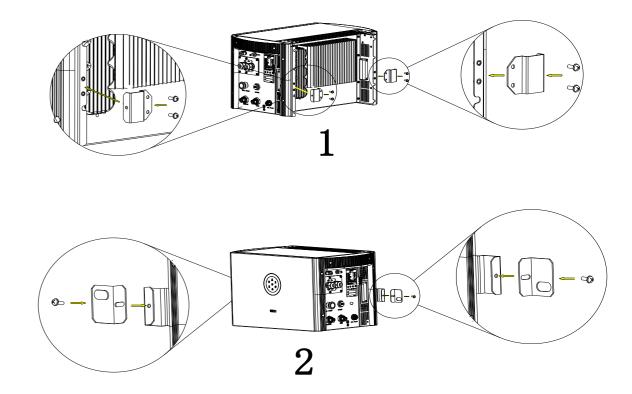

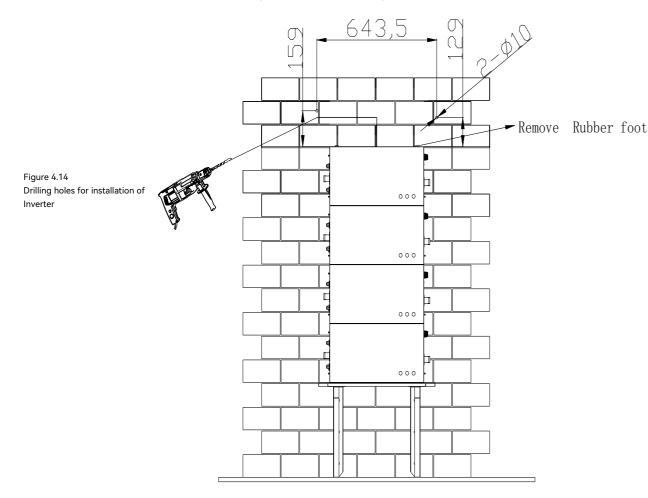

Figure 4.12 Install the locking bracket Step 5: After the battery modules installation, mark the proper positions of inverter and drill holes (10mm in diameter, 65mm in depth) on those positions by using the inverter as a template. Remove the rubber feet for the top battery module before installing inverter.

Step 6: Use a rubber hammer to drive the screw fixing seat into the holes to fix the bracket, use the wrench to tighten the screws (M8*80 screw) to secure the inverter. Secure the inverter and battery with locking brackets.

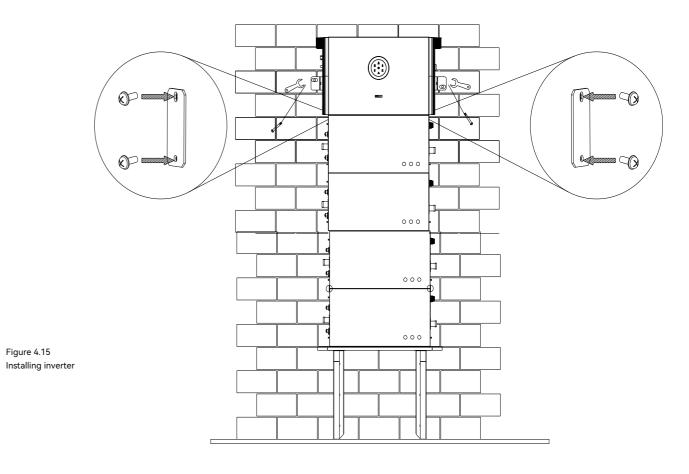

Figure 4.15

5.1 Additional Grounding Cable

Electrical connection must only be operated by professional technicians. Before connection, necessary protective equipment must be employed by technicians, including insulating gloves, insulating shoes and safety helmet.

Connect this additional grounding cable before other electrical connection.

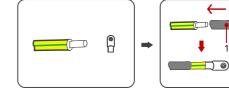

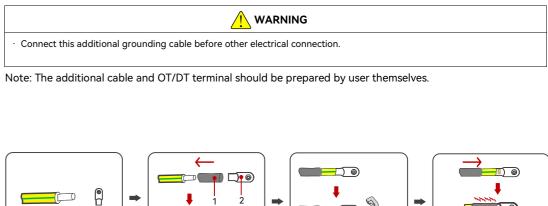

Figure 5.1 Preparing additional grounding cable

1. Heat shrink tubing 2. OT/DT terminal

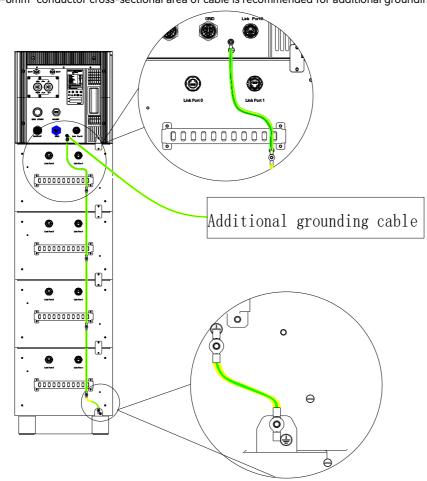

ELECTRICAL CONNECTION

___) 0

Remove the screw of grounding terminal and secure the additional grounding cable by insert a screw into the screw hole in the OT/DT terminal. Connect the grounding cables as the following diagram. Note: A 6-8mm² conductor cross-sectional area of cable is recommended for additional grounding cable.

5.2 AC Grid Wire and Backup Output Connection

AC side conductor cros cables (r		Backup side conducto of cables		Conductor material
Scope	Recommended value	Scope	Recommended value	Copper
8-14	13.3	8-10	8.37	

Table 5.1 Recommended AC cable specification

Note: If the grid-connection distance is too far, please select an AC cable with larger diameter as per the actual condition.

Power cable connection procedure:

Step 1&2: Plug in the assembly and disassembly tool to separate the locking nut and cable gland body
Step 3: Pull the assembly and disassembly tool out
Step 4: Unlock the sealing nut
Step 5: Strip the insulation off the wires with 13mm length
Step 6: Thread the cable through the cable gland and secure the wires with spanner
Step 7: Connect the cable to the inverter
Step 8: (Only applicable to market in Australia) During off grid operation time, PE line at the BACK-UP end will remain to be connected with the PE line at the power grid end inside the inverter.

Figure 5.2 Connecting the additional grounding cable

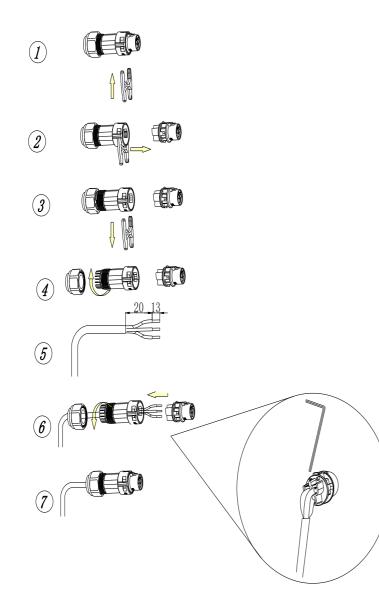

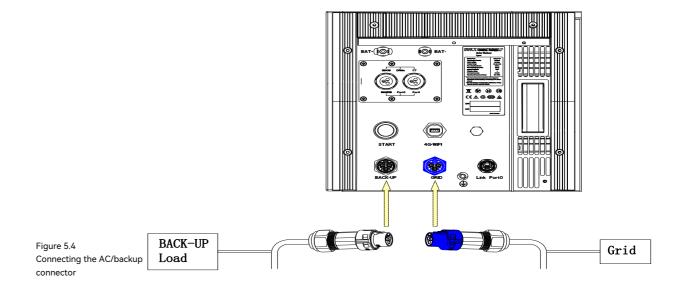

Figure 5.3 Assembling the AC/backup connector

5.2.1 Earth Fault Alarm

This inverter complies with IEC62109-2 clause 13.9 for earth fault alarm monitoring. If an Earth Fault Alarm occurs, the ring light will be lit up in red and error code <31> will be displayed on LED panel 1 until the error being solved and inverter functioning properly.

5.2.2 External AC Circuit Breaker and Residual Current Device

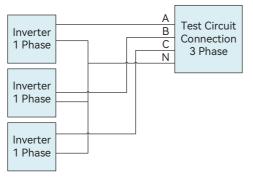

Please install a two pole circuit breaker to ensure the inverter is able to disconnect from grid safely. The integrated leakage current detector of inverter is able to detect the real time external current leakage. When a leakage current detected exceeds the limitation, the inverter will be disconnected from grid quickly. The inverter does not require an external residual current device, as it has integrated with a RCMU. If local regulations require the application of external residual current device, either type A or type B RCD is

compatible with the inverter. The action current of external residual current device should be 300mA.

Inverter type	Recommended breaker specification
HS2-3-6K-S2	63A
Notice: Do not connect multiple in	werters to one AC circuit breaker.

Table 5.2 Recommended circuit breaker specification

5.2.3 Multiple Inverter Combinations

The inverter should not be installed in multiple phase combinations.

5.3 PV Side Connection (Applicable for HS2 Series)

• Mak	e sure the PV ar	ray is well ins	ulated to gr

Conductor cross-sectional	area of cables(mm²)	Conductor material
Scope	Recommended value	Outdoor multi-core copper wire
3-5	4	cable, complying with 600Vdc

PV Connector Assembly

	Dangerous to life due to electric shock when
•	The PV panel string will produce lethal high v
le	ethal injures.
•	DO NOT touch non-insulated parts or cables
•	Disconnect inverter from voltage sources.
•	DO NOT disconnect DC connectors under loa
•	Wear suitable personal protective equipment

DC connector is made up of positive connector and the negative connector

Figure 5.5 Positive connector & Negative connector

Please place the connector separately after unpacking in order to avoid confusion for connection of cables. Please connect the positive connector to the positive side of the solar panels, and connect the negative connector to the negative side of the solar side. Be sure to connect them in right position.

round before connecting it to the inverter.

WARNING

en live components or DC cables are touched. voltage when exposed to sunlight. Touching live DC cables results in death or

ad. t for all work.

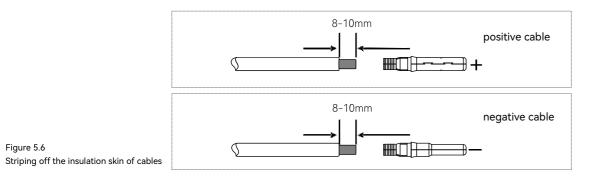

Figure 5.6

Connecting Procedures:

1. Loosen the lock screws on positive and negative connector.

2. Strip the insulation of the positive and negative cables with 8-10mm length.

3. Assembly the positive and negative cables with corresponding crimping pliers.

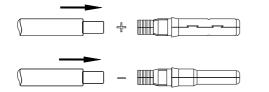

Figure 5.7 Inserting cables to lock screws

> 4. Insert the positive and negative cable into positive and negative connector. Gently pull the cables backward to ensure firm connection.

₩**□**<u>+</u>----+

5.Fasten the lock screws on positive and negative connectors.

6.Make sure the DC switch is at OFF position

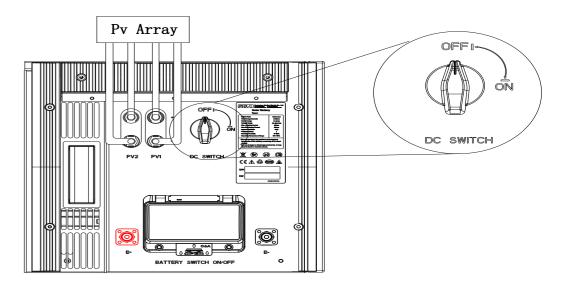

Figure 5.10 DC switch

Figure 5.9

Securing the connectors

7.Connect the positive and negative connectors into positive and negative DC input terminals of the inverter, a "click" should be heard or felt when the contact cable assembly is seated correctly.

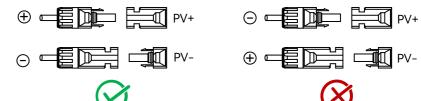

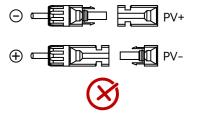

Figure 5.11 Plug in PV connectors

Inserting crimped cables to connectors

Figure 5.8

5.4 Communication Connection

Note: 1) The communication cable is one end crimped, this crimped end is for battery side connection. The

other end is for inverter side connection. Customer should crimp the other end of communication cable by themselves.

2) Confirm that the DC switch is OFF during installation to avoid short circuit caused by wrong operation

during battery wiring.

3) Please use the battery cable in original package.

5.6 Connecting Battery Power Cable

Power off the battery system before connecting the power cable to avoid high voltage danger

 \wedge

The electrical connection of high voltage battery systems must be operated by qualified technicians in accordance with local and national power grid standards and regulations.

5.7 System Connection HS2 Series

The system connection in Germany, Australia and New Zealand is as below, the neutral cable of AC and

backup side must be connected together for the safety reason. Note: DO NOT connect the PE terminal of BACKUP side.

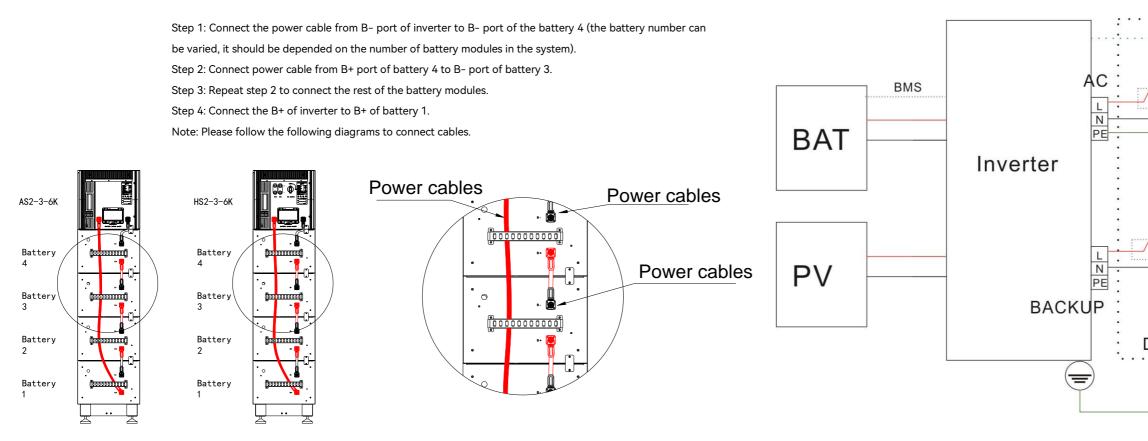

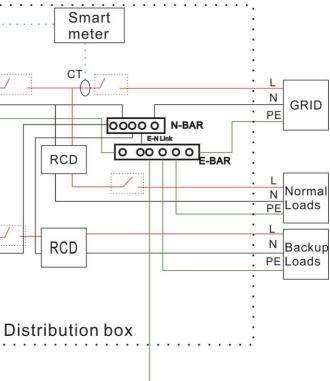

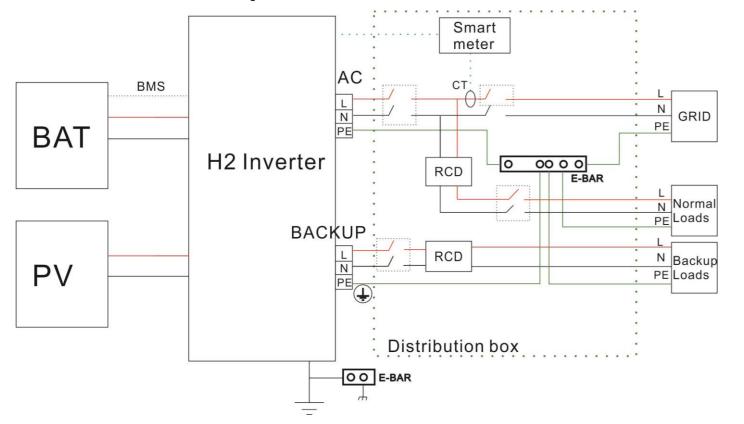

Figure 5.15 Connecting battery power cables

AS2 Series

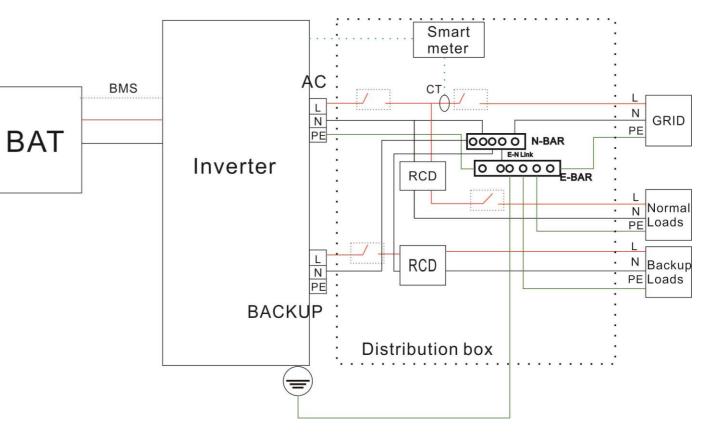

The system connection for grid system without special requirements is as below.

Note: The backup PE line and earthing bar must be grounded properly. Otherwise, backup function may be inactive during blackout.

The system connection in Germany, Australia and New Zealand is as below, the neutral cable of AC and

backup side must be connected together for the safety reason. Note: DO NOT connect the PE terminal of BACKUP side.

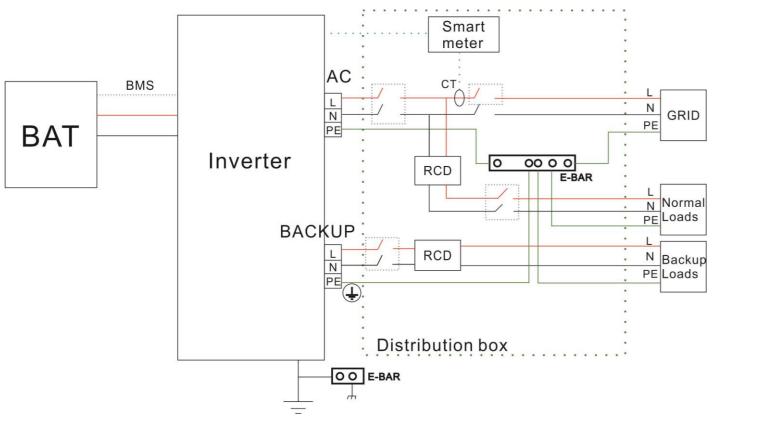

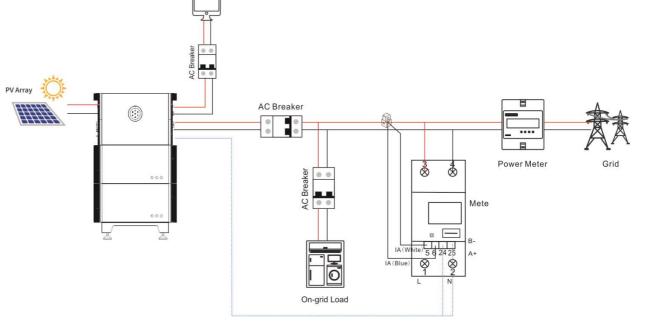

The system connection for grid system without special requirements is as below.

Note: The backup PE line and earthing bar must be grounded properly. Otherwise, backup function may be inactive during blackout.

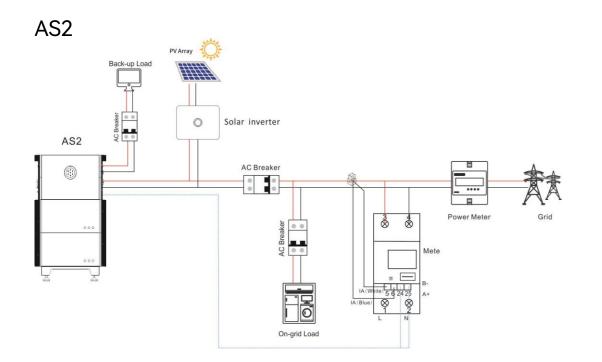

Back-up Load

SAJ

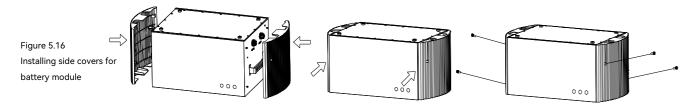

5.10 AFCI (Optional)

The inverter is equipped with arc-fault circuit interrupter (AFCI). With AFCI protection, when there is an arc signal on the DC side due to aging of the cable or loose contact, inverter can quickly detect and cut off the power to prevent fire, making the PV system run more safely.

5.9 Installation of Side Covers of Battery Unit

Install the side covers for battery module and secure it with screws (M4*25).

COMMISSIONING

6.1 Start Up and Shut Down the Energy Storage System 6.1.1 Start Up

Step 1: Turn on the circuit breaker Step 2: Press and hold the main switch for 2-3s, until the display is on

6.1.2 Shut Down

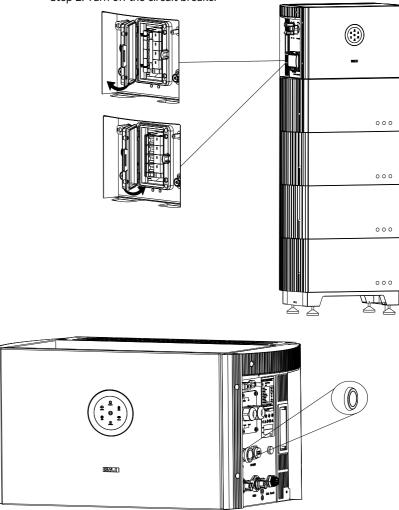

Step 1: Press and hold the main switch for 5s, until the display is off Step 2: Turn off the circuit breaker

Figure 6.1 Circuit breaker of inverter

Figure 6.2 Start button of inverter

6.2 Introduction of Human-computer Interface

System commissioning

After the wiring is completed, please refer to the inverter manual for system commission and operation. Note: Turn on the circuit breaker and main switch when using battery.

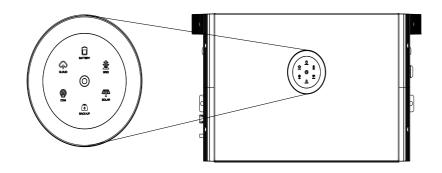

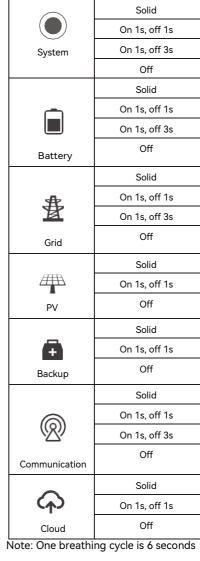

Figure 6.3 Human-computer interface

Off	Disconnected
is 6 seconds	

6.3 Commissioning

Start up:
(1) Connect the AC circuit breaker
(2) Connect the DC circuit breaker between inverter and battery (if applicable)
(3) Turn ON the battery (if applicable)
(4) Turn ON the DC switch on the inverter
(5) Install the communication module into the inverter
(6) Setup the initial setting for inverter on eSAJ Home
(7) Observe the LED indicators on the inverter to ensure the inverter is running properly

6.4 eSAJ APP Connection

6.4.1 Account Login

Step 1: Log in to eSAJ Home, if you do not have an account, please register first.

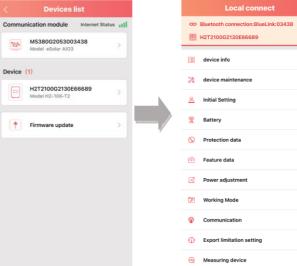

Step 2: Go to the "Tool" interface and select "Remote Configuration"

Step 3: Click on "Bluetooth" and activate the Bluetooth function on your phone, then click on "Next"

Step 4: Choose your inverter according to your inverter SN's tail numbers

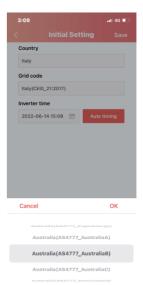

Step 5: Click on the inverter to enter inverter setting

Step 6: Select the corresponding country and grid code for

6.5 Working Modes

6.5.1 Selecting Working Modes Procedures

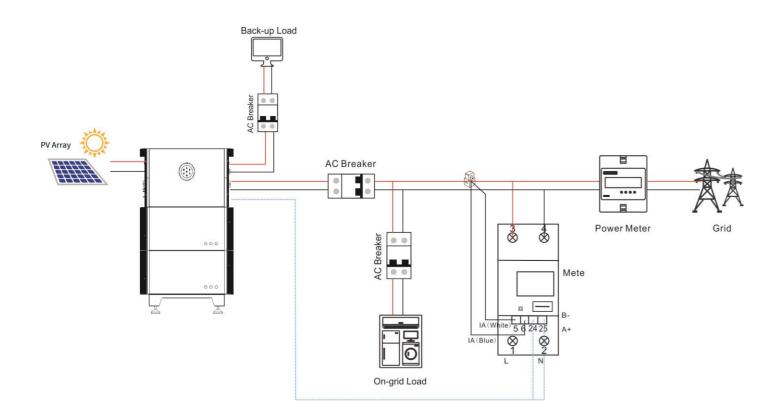

6.5.2 Working Modes Introduction

Self-consumption Mode: When the solar is sufficient, electricity generated by photovoltaic system will be supplied to load first, the surplus energy will be stored in battery, then the excess electricity will be exported to the grid. When the solar is insufficient, the battery will release electricity to supply load.
Back-up Mode: Reserved Backup SOC setting value can be adjusted, when battery SOC is less than reserved SOC value, battery can only be charged, until SOC reaches reserved value, the battery will be stopped charging; when SOC is larger than SOC setting value, battery will behave as Self-use mode.

Time-of-use Mode: Battery charging period and discharging period can be set , during charging period, battery can only be charged, while in discharging period, battery can only be discharged, the rest of the period, battery will behave as Self-use mode.

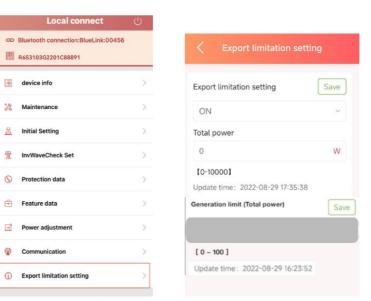

6.6 Export Limit Setting

6.6.1 APP setting

次

Ŧ

There are two methods to control the export limit, the two methods are alternative to each other.

Method 1: Export limitation setting is to control the export electricity to the grid.

Method 2: Generation limit is to control the electricity generated by the inverter.

6.7 Self-test (For Italy)

Italian Standard CEI0-21 requires a self-test function for all inverter that connected to utility grid. During the self-testing time, inverter will check the reaction time for over frequency, under frequency, overvoltage and undervoltage. This self-test is to ensure the inverter is able to disconnect from grid when required. If the self-test fails, the inverter will not able to feed into the grid.

The steps of running Self-test are as followed:

Step 1: Connect a communication module (Wi-Fi/ 4G/Ethernet) with inverter (connection procedure can refer to eSolar Module Quick Installation Manual)

Step 2: Select Italy for Country and choose your corresponding Grid Code from Initial Setting.

Step 3: You can choose self-test item required. Individual self-test time is approx. 5 minutes. All self-test time is approx. 40 minutes. After the self-test is completed, you can save the test report. If self-test is failed, please contact with SAJ or your inverter supplier.

Step 1: Select Inductive Adjustment Var or (-60%Pn ~ 60%Pn.

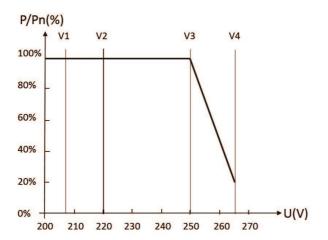

Step 1: Select Power Adjustment and enter password "201561".

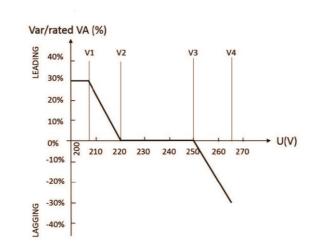

Step 2: Select Capacitive Power Factor or Inductive Power Factor according to your local grid regulation. The power factor range is from 0.8 leading ~ 0.8 lagging.

Step 1: Select Inductive Adjustment Var or Capacitive Var according to your local grid regulation. The power range is from

6.8.2 Setup V-Watt and Volt-Var Mode

This inverter complies with AS/NZS 4777.2: 2020 for power quality response modes. The inverter satisfies different regions of DNSPs' grid connection rules requirements for volt-watt and volt-var Settings. e.g.: AS4777 series setting as below Fig 6.2&6.3.

		(<

Figure 6.5

Curve for a Volt-Var control mode (AS4777 Series)

Setting procedure:

1.AS4777 grid compliance has been set during production, please select corresponding grid compliance according to state

regulation during installation. You can choose a state regulation compliance with your local grid via eSAJ Home.

2. Log in to eSAJ Home, click "Local Connection", for connection procedure please refer to chapter 5.3 for Nearby

monitoring.

3. Click "V-Watt/V-Var" to enter DNSPs settings, choose a suitable state regulation from the drop down list.

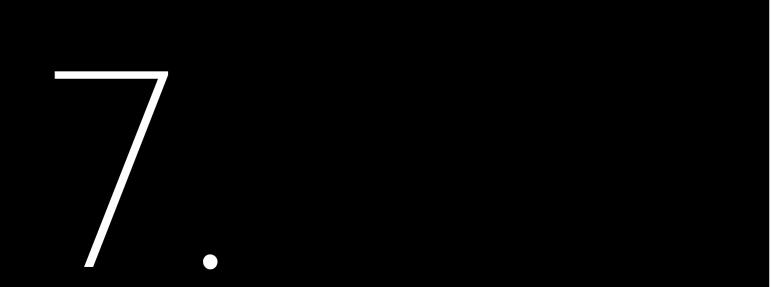

Note:

With regard to the Power rate limit mode, SAJ sets the product WGra to 16.67%Pn by default in the following cases according to the requirements of 3.3.5.2 as 4777.2: 2020.

1. Soft ramp up after connect,

2. Reconnect or soft ramp up/down following a response to frequency disturbance.

MAINTENANCE

7.1 Transportation

Lithium batteries are dangerous goods. Passed the test of UN38.3, this product meets the transportation requirements for dangerous goods for lithium batteries. After the installation of the battery on site, the original packaging (contains the lithium battery identification) should be kept. When the battery needs to be returned to the factory for repair, please pack the battery with the original packaging to reduce unnecessary trouble.

Take care of the product during transportation and storage, keep less than 6 cartons of inverter in one stack, keep less than 4 cartons of battery in one stack.

7.2 Storage

After purchasing the battery, please store it with following instructions:

- 1) Please store it in a dry and ventilated environment, keep it away from heat sources;
- 2) Please keep it in an environment with storage temperature as -20 ° C ~ 40 ° C, humidity <85% RH;
- 3) For long-term storage (>3 months), please put it in an environment with a temperature of -25 °C to
- 25 °C and a humidity of < 85% RH;

inverters:

•The battery remains 50% power when it is sent from the factory.

- The longer the battery is stored, lower the SOC. When the battery remaining voltage fails to reach the startup voltage requirement, the battery may be damaged.
- -Judgment condition: Close the battery breaker switch and press the main switch. At this time, if the LED light is solid green, it is running normal. If the LED light is red or off, the battery is in fault.
 - The battery cannot be disposed of as household refuse. When the service life of the battery reaches to
 - the limit, it is not required to return it to the dealer or SAJ, but it must be recycled to the special waste
- lithium battery recycling station in the area.

4) The battery should be stored in accordance with the storage requirements mentioned above, and the battery should be installed within 6 months since delivered from the factory and used with compatible
